

ABSTRACT

Poisoned modified polymer of poly(ethynylene phenylene
ethynylene silylene) type that may be obtained by
5 selective addition of a compound containing only one
reactive function to the acetylenic bonds of a
poly(ethynylene phenylene ethynylene silylene) polymer.

Compositions containing these modified polymers.

10

Process for preparing these modified polymers.

Novel self-poisoned polymers of poly(ethynylene
phenylene ethynylene silylene) type.

15

Cured products that may be obtained by heat treatment
of the said modified or self-poisoned polymers.

The polymers and cured products have improved
20 mechanical properties while maintaining excellent
thermal properties.
